LC3 Register File and ALU question

0 Votes

discussion posted 2 days ago by **KarenWest**

Hi, I think this lab is close, but there seems to be an error and I do not know what it is. I hit the check button, so if anyone in the class, the professor or teaching assistants are able to have a look, it should be visible to you now. Thank you very much for your help the past few days with errors like these, usually syntax errors, but this time, I'm not sure, since I thought I got the wire renaming correct. Thank you - still trying to finish the class on time, and I just started week 6, and still have weeks 7 and 8 to go before May 12th! Thanks.

 LC-3 Lite problem	2	
 Muxes trouble	2	
 Error	3	
 Error detected: Test 7: Expected q=H at 139ns.	2	
 LAB 6. ADDERS - not follow	2	
 help with my design	2	
 Differences between flip-flops	2	
 Unable to use labels	2	
 I don't understand the registers renaming	2	
 Error in optional FSM lab.. "No node named S[3]"	2	
LC3 Register File and ALU		

Swap the A and B inputs to the ALU (the pass

through mode uses the A input).

(FYI, for the future it's a little more convenient for us if you post in the discussion for that lab, as we can just click on the link and go to that page.)

I did not know that about posting specific lab questions on discussion forum pages that are completely related to that lab - sorry about that - thanks for letting me know. I did not have to ask questions on labs until last week, which is when you started to hear me ask those! It's now May 8th and I'm in section 6, hoping to finish sections 7 and 8 by the end of the course on May 12th (actually, I really need to finish by the 11th, since I have to go somewhere on the 12th!) Thanks for the help!
