cannot load my former designs

discussion posted 3 days ago by **KarenWest**

Hi, I cannot load my former designs to complete this lab. I mentioned this once before, and someone said to use the one in the solutions, even if I got it correct, if I could not load mine. Please let me know how to proceed. I got all the former labs correct and saved every one of them, and there does not seem to be solutions for all the former designs we made to use instead, and I cannot load mine, so I have no way of completing this "put it all together LC3 lab" unless I have devices to do that with. Thank you!

The solutions should always be there in the right panel of available modules.

Your former designs are tied to your browser and computer, so you have to reuse the same machine and browser and OS. Is this the case?

Yes, I am using the same computer and browser (SUSE Linux and Mozilla FireFox browser).   •••

I just went through each device - specifically - this is what I can use from solutions or my own user space of designs, and also, what I cannot get from either space:

https://courses.edx.org/courses/CornellX/ENGRI1210x/1...

From my user space: LC3 Address generation logic, branch logic condition code register, ISA increment PC logic, loadable 16 bit register

From the solution space: register file plus ALU, and FSM

On the grid: the memory for this lab is visible

Missing from both spaces: BEN logic, LC3 Condition Code Logic, ISA PC Register with set and reset, set to x3000, and the LC3 lite PC reg.

These are the major components I see I can use and what are missing. I did not try all the smaller components yet.

Any idea what is wrong, or what you suggest I try to remedy this issue?

Thanks.

posted 3 days ago by **KarenWest**

That is odd. You should see 10 /solution components on the right.

I think if you click Check we will be able to see that you do.

posted 3 days ago by **DavidAlbonesi**   STAFF

I'll click check now. Let me know if you know why I cannot load either your solutions or my own user designs from former labs. Thank you.

posted a day ago by **KarenWest**

I just hit the check button on the last 2 "complete the LC3 lite labs". Let me know if I should be able to see either your solutions or my own user designs from former labs, and I will try to finish these before the course ends on Tues. Thanks.

Can you try a different browser and see if the /solutions show up?

···

Given the course ends tomorrow, and I will be out during business hours tomorrow, I am not sure if I will have time. If I do have time, sure, I'd be happy to do that experiment, to see if the solutions show up with a different browser on my SUSE Linux machine. I've already "passed" the course and sections 1-6 were a review, so only parts of sections 7-8 are new, so I want to make sure I see all those videos since I'm just starting sections 7-8 today. I started the course 2 weeks late unfortunately! The labs are optional for those last 2 sections, the hack-a-thon, so I will not get that done in time. I figure if I don't finish all the videos by May 12th, I can probably view the final few videos I missed after the course ends, even if I do not get any credit for it in the online course? I don't mind actually, since I do these just for the review or learning experience, and not so much the grade and certificate, and I did already do well enough to get a certificate. So if I do get to try a different browser, I will let you know if I can then see the solutions. The problem seems to be that they are all there on the list, both the solutions and the designs I did, but when I hit the load button, you don't see them in the right hand column in the Jade window.
